Company: SCALEWORKS SP Z O O

Location: Kraków

Category: computer-and-mathematical

Welcome to Centage, we're happy you're applying! We think the most important thing about Centage, about working anywhere, in fact, is the people and how they interact.

At Centage we foster an environment of caring, helpful, considerate and empathic people. We think that's the best environment to foster excellence and it is one of the things we care most about in our hiring   process. If you are empathic and able to talk with humility and encourage others to thrive, we want tovhear from you!

We don't want brilliance without empathy. We don't want creators who don't share. We don't want rock stars that don't contribute to the community.

Overview

Centage is a SaaS financial planning and analysis (FP&A) software company. Our signature product, Planning Maestro, gives our customers the financial visibility and control needed to lead their organizations to growth and profitability. It's companion product, Analytics Maestro, gives customers the ability to report and analyze their data in the Excel.

Requirements

Who You Are

- You have 3+ years of Software Development experience
- You have experience with C# and .Net
- You have experience creating Microsoft Excel Plugins
- You have experience with SQL Server Analytic Services

- You're capable of independently delivering tasks with moderate to high complexity

- You have experience with Cloud computing platforms such as AWS or GCP (plus)

- You have experience with Kubernetes (plus)

- You have an entrepreneurial mentality and initiative to iteratively improve applications, team processes, and personal skill set

- You are open-minded towards learning new technologies

- You have a strong understanding of coding standards and design principles / patterns

- You have a working knowledge of Git and JIRA

- You have some experience with Agile and Test Driven Development

- You're familiar with build and release procedures and tools such as Jenkins

- You're capable of providing production support, debugging, and troubleshooting for moderate to high-complexity issues

- **Nice to have:** Multi-tier application development knowledge; Third-party app integration experience

Responsibilities

Centage is investing heavily in improving the Planning Maestro and Analytics Maestro products through greater performance and stability, upgrading our tech stack and new features. We're using the best available technologies to deliver modern, engaging, reliable, and scalable experiences to meet the needs of our customers. If you enjoy taking on new challenges, working in a rapidly changing environment, learning new skills, and applying it all to solve large and impactful business problems, we want you as part of our team.

This position will focus on enhancing and improving Analytics Maestro and relaunching it as CentageAnalytics

What you'll do (Design & Development)

- Participate in the full SDLC; including development, estimation, planning, and design

- Contribute to overall system design, architecture, security, scalability, reliability, and performance of applications

- Support the build and deployment pipeline

- Contribute to technical design and delivery of complex features across multiple systems

- Help create documentation and training related to technology stacks and standards within your team
- Use/contribute to the refinement of Engineering related tools, standards, and training
- Engage/collaborate with external teams and vendors when necessary
