About mParticle

 mParticle is widely recognized as one of the leading customer data platforms, serving hundreds of global brands and helping them turn data to insights, and insights to action. Built on top of end to end streaming architecture, we are committed to empowering businesses to deliver personalized and engaging experiences to their customers across all screens and devices. We believe that the opportunity to help teams activate insights from their customer data to deliver more personalized and adaptive experiences is more important than ever.

Recognized as one of Crain's 100 Best Places to Work in New York City and one of Wealthfront Career Launching companies of 2021

We at mParticle choose to create a company that is as diverse and inclusive as the world we live in by attracting, growing & keeping the best talent. Employment opportunities are available to all applicants without regard to race, religion, color, national origin, gender, sexual orientation, age, marital status, veteran status, or disability status.

Here at mParticle, everyone is equal. We and are looking for someone who demonstrates empathy and sincerity to all roles and teammates.

About the job

We are looking for Cloud Systems Engineers located in Poland to join our growing remote production operations team.

The candidate will be responsible for maintaining strict production SLAs of a custom distributed application running on AWS cloud infrastructure, monitoring, alerting, incident management, security, and overall platform stability and improvement.

The ideal candidate will have knowledge of:

AWS

Experience with various Linux OS distributions (CentOS, Ubuntu, AWS Linux)

Excellent verbal and written communication skills in English

Excellent troubleshooting and analytical skills

Intermediate scripting knowledge

Solid ability to write intermediate SQL

Experience with monitoring solutions and metric analysis

Understanding and ability to troubleshoot network communication issues.

We are seeking someone who wants to be a major contributor in a small, dynamic work environment, loves a challenge, and has a strong balance of technical and people skills.

The Cloud Systems Engineer will be responsible for:

Maintain, monitor, and help improve the performance and availability of the 24x7 production environment including networks, servers, databases, etc.

Identification of root causes on critical problems throughout the platform, incident reports and communication

Troubleshooting and supporting our production and QA environments

Follow established internal workflows for resolving customer requests/tickets

Participate in on-call rotation and provide hands-on support during emergencies, outages, and service transitions.

Participate in creating long-term and short term strategies for scaling the production environment

Continuous improvement in system visibility and applications with advanced monitoring,

metrics and log analytics

Adhere to a comprehensive incident management program including problem management

Generate KPIs for service availability, uptime, and adherence to SOPs, and SLAs

Is this opportunity right for you? We are looking for candidates who have:

3 + years' experience with 24x7 production operations

At least 2 years' experience with Linux server administration

Experience with Amazon Web Services (EC2, ECS, S3, etc.)

Intermediate scripting skills (Bash, Python)

Intermediate SQL skills

Technical knowledge of several monitoring and analytics tools such as AWS CloudWatch, Sumologic, Datadog

Experience with Docker, Vagrant, Ansible, Kubernetes

Experience maintaining a secure production environment for US based customers

BS in Computer Science/Engineering or equivalent professional experience

This role will be hired through our partner (To learn more about details for your company use the link) Please note compensation will be paid in your country's local currency.
