Poland Jobs Expertini®

DevOps Engineer (Linux)

Apply Now

Company: LeverX

Location: Poland

Category: computer-and-mathematical

LeverX is looking for DevOps Engineer (Linux). Don't miss this exciting opportunity to gain experience working with a global IT partner.

Our DevOps team is responsible for supporting multiple products and development teams in automating infrastructure, build pipelines, deployment, and production support. As a DevOps Engineer, you will be involved in architecting, automating, and deploying various products using CI/CD automation technologies.

We work both with startups and enterprises, to help them make the development process faster for developers and more transparent for management. Our expertise starts from generic web applications, through IoT or Analytics software and to ML and BigData.

We're seeking for the professionals who are able to both create new and debug/improve existing.

REQUIREMENTS

Docker/Podman, general understanding of OCI ideas

Cloud technologies (AWS, GCP, Azure, AliCloud)

Kubernetes/OKD/k3s

SQL databases

NoSQL databases

Jenkins/GitlabCI/TeamCity

Kafka/RabbitMQ/MQTT

General Unix/Linux

Monitoring solutions

Proxy and Web-servers

RESPONSIBILITIES

Work in fast-paced environments to assist in migration and deployment of applications in a cloud, hybrid or on-prem infrastructures.

Provide assistance to application developers creating deployments, standing up common services and recommending solutions for maximizing efficient use of hardware resources.

Utilize Cloud Native Computing Foundation (CNCF) tools and software.

Deploy, maintain, and support applications, servers, and cloud development platforms in support of technology projects across a wide range of languages, operating systems, and testing platforms.

Work closely with customers to meet their DevOps needs, address bugs, and achieve company goals.

Help testing team(s) orchestrate application test framework for routine test pipelines.

Document and improve the group's DevOps processes

Maintain high standards of application design, including but not limited to adherence to architectural, security, and scalability standards and best practices
