Full Stack Engineer (Partner Portal)

Company: Vonage

Location: Poland

Category: computer-and-mathematical

Vonage Engineering Management Mission: Vonage is the emerging leader in the $100B+ cloud communications platform (CPaaS) market. Customers like Airbnb, Viber, Whatsapp, Snapchat, and many others depend on our APIs and SDKs to connect with their customers all over the world. As businesses continue to shift to a real-time, customer-centric communications model, we are experiencing a time of impressive growth.

Why this role matters

The Engineering team at Vonage is a fast growing group of talented engineers. Our Engineers face multiple challenges associated with high performance, distributed systems, and processing large volumes of data in real time.

The Support Engineering team takes care of critical applications which enable teams to do important changes to customer accounts and Vonage communication platform. In addition, we are developing a brand new micro frontend platform for customers of Vonage.

The team is looking for a Software Engineer to help us build new features in our applications. In addition to hands-on development, the ideal candidate will be involved in design of the application, and mentoring junior engineers

What you will do

Contribute to the implementation of new features in our microfrontend platform.

Migrate and enhance existing business features out of our old platform.

Design and Improve existing APIs and microservices based on product requirements

Maintain existing legacy Backend Systems.

Set high standards to ensure the delivery of secure, high quality, well-tested and scalable. software to meet customer and business requirements.

Full Software Development Lifecycle from requirements to deployment and operation in production.

What you will bring:

Solid Java development Experience on the backend

Frontend development experience with VueJs/Angular/ReactJS

Experience with Relational databases.

Cloud experience (ideally AWS)

Ability to pick up new software, frameworks and APIs quickly.

Understanding of monitoring, systems provisioning, HTTP etc.

Strong focus on Testing.

Entrepreneur Mindset.
