## Java Backend Engineer

Technology Lead

115383BR

Job Description

**Job Title:** Java backend Engineer (Poland, valid work permit in Poland is required)

**About You:** Are you passionate about Java Backend development? Do you thrive in complex technical landscapes? Join us and be a part of our dynamic team, where your skills and talents can truly shine.

**About Infosys:** Infosys is a global leader in next-generation digital services and consulting. Our mission is to empower organizations worldwide through cutting-edge technology solutions. With a presence in 54 countries, we've been serving 46 clients since 1981. Our primary focus is on software development, maintenance and independent validation services to companies in finance, insurance, manufacturing and other domains.

**Role Overview:** In this role, you will interface with key stakeholders and apply your technical proficiency across different stages of the Software Development Life Cycle including Requirements Elicitation, Application Architecture definition and Design. You will play an important role in creating the high-level design artifacts. You will also deliver high-quality code deliverables for a module, handle validation for all types of testing and support activities related to implementation, transition, and warranty. You will be part of a learning culture, where teamwork and collaboration are encouraged, excellence is rewarded, and diversity is respected and valued.

## **Responsibilities :**

Develop and maintain multithreaded Java applications, emphasizing fault-tolerant, scalable, and high-volume systems.

Serving as a core member of an engineering team that designs and develops software applications.

Writing code and unit tests, working on API specs, automation, and conducting code reviews and testing.

Performing ongoing refactoring of code, utilizing visualization and other techniques to fast-track concepts, and delivering continuous improvement.

Build Proof of Concepts and work with the Team Lead in extending concepts to Enterprise Systems.

Ability to effectively debug and resolve technical issues and/or defects that may be reported because of faults in the production system.

Manage risks and issues as well as cross dependencies with other teams. Communicate effectively with internal teams and clients to address technical design and functional gaps.

Partner with Leads and other team members to continuously upgrade applications/platforms as per industry standards and Technology stack latest offerings

Harness the opportunities to build Intellectual Property within the team and for the enterprise.

## **Qualifications:**

Proven experience as a Java Backend Developer (4+ years) or similar and strong proficiency in Java programming language (Java 8+)

In-depth knowledge and experience with Spring framework, and Spring Boot in particular

Proven experience in Java development, including Hibernate

Proficiency in relational databases, MySQL preferably, but also Oracle or MS SQL

Strong understanding of Microservices architecture and design principles

Familiarity with Linux environments

Communication skills, including the ability to engage effectively with customers and stakeholders.

Having a strong record in architectural roles, and consistently delivering innovative solutions, would be a plus.

**Joining Infosys means:**

Contribute to projects that transform clients' businesses.

Thrive in a diverse and supportive teamwork environment.

Work with the latest tools and tech stacks.

Access mentorship and leadership opportunities.

Invest in your career with training, global exposure, and leadership pathways.
