**JavaScript Developer ( Node.js)**

**Apply Now**

Company: Schibsted Tech Polska

Location: Kraków

Category: computer-and-mathematical

**Imagine the possibility of helping 10 million people find their dream job with your code.**

**ABOUT THE PROJECT**

We are embarking on a new journey in the Nordic Marketplaces, and you are warmly invited to join!

We are looking for **a frontend developer** that would like to work together with us on creating equal job opportunities for everyone across the Nordics. Through our leading digital marketplaces FINN.no (Norway), Blocket.se (Sweden) and Oikotie.fi (Finland), we address a total market of more than **10 million people and more than 1 million companies**

In 2023 we consolidated across the Nordics, with the vision of building the next generation job marketplace working together across markets. By joining forces we believe we can create more value and make a bigger impact in the Nordic labour market.

**ABOUT THE TEAM**

We are looking for YOU to join our User Connect team, which is responsible for our common **Easy Apply** process. The team's ambition is to deliver a delightful application experience for candidates across all devices which means balancing between responsive design and hybrid and native app development.

Our team consists of 1 PM, 1 UX, 1 EM and 5 developers. The development team is located in Cracow, and you will collaborate closely with the Product Manager and UX who are situated in Scandinavia. In addition, you will be in contact with colleagues in **FINN, Blocket and Oikotie** to understand both candidate and customer needs, and also our internal business requirements.

As the team works closely with both internal teams in three marketplaces and multiple third party ATS-es (Applicant Tracking Systems) operating in the Nordics, documentation and well designed APIs are crucial for creating an effective collaboration environment.

As a **frontend developer** in this team you will be working with responsive web-design, CSS, web components and JavaScript or TypeScript with a focus on the user experience.

You will also have the opportunity to get experience with deploying Docker artefacts to the Kubernetes cluster in Google Cloud and monitor applications with Prometheus, Grafana and TrackJS.

All of our code is hosted on GitHub. We believe in continuous delivery, and the team is given the full responsibility to deliver code changes all the way to production.

**ABOUT YOU**

- You have a solid knowledge of **JavaScript**, **TypeScript** is more than welcomed

- You have experience in **React**

- You have some knowledge of **Node.js, Remix** and server-side rendering

- You understand what can be achieved in a modern web browser as well as what's required when developing for mobile apps

- You have a focus on code quality and test coverage

- You have a good understanding of concepts and/or experience with continuous deployment

- It would be great if you have some **GCP** experience, knowledge of **Docker** and **Kubernetes** would definitely be a plus

- You are open, curious and eager to learn new things

- You are a team player, you embrace collaboration and treat it as a default way of working

- You are a good communicator, which is key in a team that is distributed across several countries

- You're active in meetings and good at turning the conclusions into actions

**We work in hybrid model - at least 1x per week we meet in the office in Krakow**

**So if you want to be a part of the team creating equal job opportunities for everyone - APPLY!**

**Apply Now**
