

Performance Test Engineer

[Apply Now](#)

Company: Kaseya

Location: Kraków

Category: computer-and-mathematical

What You'll Do

Drive efforts to design, develop, and support the load and performance test framework

Execute on the load and performance testing standards, tools, techniques, and processes

Write load and performance tests following industry best practice and coding standards

With support will collaborate with developers and architects to understand application architecture and suggest monitoring various server/statistics using monitoring tools during load and performance test execution

Conduct defect triage meetings, approve fixes to performance test environment and track defects to closure. Conduct and communicate the test results to the project stakeholders

Identify areas of performance bottlenecks, report observations to stakeholders and make appropriate recommendations

Review the results captured from application performance monitoring tools, support the identification of performance issues, and make recommendations to stakeholders

Essential Responsibilities:

Bachelor degree in Computer Science or a related discipline OR typically 5 to 7 years' experience in QA or Development role

In-depth knowledge of one or more performance testing tools, such as

LoadRunner/StormRunner/Performance Center, JMeter, K6, MSVS, Borland Silk Performer, Blazemeter, NeoLoad, Gatling or LoadUI

Experience in designing, coding, testing and correcting scripts from agreed specifications, and subsequent iterations, using agreed standards and tools, to achieve a well-engineered result

Experience in working on and/or leading several non-functional test projects through all phases

Must be able to work directly with the scrum teams to determine the health of a feature and clearly communicate the health to others.

Good applications/technology knowledge, building on specialist domain knowledge with practical experience of engineering/development tools and platforms required to deliver

Solid understanding with respect to analysis and design, implementation and system integration, execution as well as results evaluation, problem resolution and planning

Programming knowledge and technical expertise in script languages (Shell, Perl, etc.)

Knowledge of Cloud Platforms and strong working knowledge of monitoring tools such as Dynatrace, Kibana or New Relic

Qualifications:

Strong use of CI tools

Technical awareness and a sound understanding of software architectures

Ability to understand NFRs and liaise closely with Architects and Product Owners

Experience working in Continuous Integration environment and configuring tools

Experience testing within Agile delivery environments

Experience with version control systems such as Git/SVN

Expertise in effective defect management and triage strategies

Good verbal and written communication skills, with the ability to communicate issues to other technical people, and sometimes to non-technical people
