

Senior Fullstack Engineer

Apply Now

Company: Apollo

Location: Poland

Category: computer-and-mathematical

****This is a Permanent EoR role and not a B2B Contract******OUR ROLE & MISSION** As a **Senior Fullstack Engineer** at Apollo, you will work with Apollo's 200M+ Leads data and build features on top of it. You will be responsible for improving the quality of our data and building customer-facing products by coming up with innovative, yet simple, solutions and implementing them end-to-end. This involves building highly scalable web services, an excellent understanding of software design and databases, and a solid grasp of frontend engineering. You will be a critical part of our growing company, working on a cross-functional team to implement and drive best practices in technology, architecture, and process. In this role, you will interface with a product, design, software engineers, and members on teams outside of Engineering. At Apollo, we are obsessed with improving quality, automation, and squashing any bugs that sneak through, and we expect the same from you. You have a drive to constantly investigate performance improvements and generate innovative ideas.

OUR TECH STACK

Frontend: React/Redux/NodeJ

Backend: Ruby/Ruby on Rails/MongoDB/Redis/Elasticsearch

Infrastructure: Kubernetes/Docker/Ansible/Terraform in infrastructure

DAILY ADVENTURES & RESPONSIBILITIES

Design, implement, test, deploy and iterate on end to end features in our products covering both frontend and backend

Implement pixel perfect design as delivered by our designers that works across different browsers, according to specifications provided

Produce clean and well-structured code, with detailed specifications and documentation

Help maintain code quality, organization, automation and continuous delivery

Effectively communicate development progress or blockers to the product lead, engineering manager, and other stakeholders

Work effectively as part of a large global team

Attend and engage in scrum ceremonies, oncall, and other team processes

Write unit/integration tests and contribute to engineering wikis

QUALIFICATIONS

6+ years of industry experience in backend development and at least 5+ years in frontend development

Solid understanding of Ruby, Ruby on Rails, JavaScript (ES6), React, Redux, HTML, and CSS

Strong system design fundamentals and experience building scalable systems

Good understanding of software development lifecycle

Strong analytical and problem-solving skills

Proven software engineering skills in production environment, including test-driven development

Experience with Cypress in writing meaningful tests

Your code is comprehensible, well-structured, and highly performant

Nice to have:

Experience in Python

Experience with Sidekiq

Experience with Spark or other distributed processing frameworks

Experience with Google Cloud Platform, Databricks, Snowflake, MongoDB, Terraform, Ansible

Understanding of Design Systems and experience using them for frontend development
