Senior Python Engineer (Application Platform)

Apply Now

Company: PandaDoc

Location: Poland

Category: computer-and-mathematical

Currently, PandaDoc is seeking a **Senior Python Engineer** to join our Application Platform Track.

We are looking for people who believe in the PandaDoc culture and are ready to develop secure, reliable, and scalable product solutions within our fast-growing business.

In the Application platform track, we own several mission-critical domain services and make them reliable and convenient for both internal and external users. Our goal is to build multi-product, high-performance, stable service solutions for our product/business operations/finance/customer success teams to integrate and operate with.

Are you adaptable, driven, and friendly? Do you thrive in a fast-paced work environment where collaboration is the norm? If the answer is yes, then you're a Panda and we want you to join our team

In this role, you will:

Participate in the whole development process from backlog refinement and testing to launching product features and technical improvements;

Build and maintain application architecture;

Actively collaborate with product managers and scrum masters;

Follow and contribute to agile development processes (Scrum framework).

Our stack:

Service-oriented architecture but be prepared to deal with legacy code as well as monolithic

services based on the Django framework;

Two main stacks: Python and Java: Python services are mostly written using AsyncIO frameworks and libraries, but we also have Django-based services and a lot of Celery workloads;Java services based on Spring Boot with custom extensions, Java 11, and Gradle as a build tool;

AWS and K8S are used extensively for provisioning and deploying workloads;

The main cross-service communication transports are NATS, Kafka, and RabbitMQ;

Grafana stack for monitoring, alerting, and distributed tracing

About you:

At least 5+ years of development experience with Python;

Experience with the Django framework;

Experience with any relational databases (SQL queries, migrations, optimization);

Experience with Java and readiness to write in Java occasionally;

Experience with message queues (e.g., RabbitMQ, NATS, Kafka);

Care about quality and you know what it means to ship high-quality code;

Able to put yourself in the shoes of your users and be a steward of crafting great experiences;

English: intermediate+ (verbal and written).

Company Overview:

PandaDoc empowers more than 50,000 growing organizations to thrive by taking the work out of document workflow. PandaDoc provides an all-in-one document workflow automation platform that helps fast-scaling teams accelerate the ability to create, manage, and sign digital documents including proposals, quotes, contracts, and more.
