Company: IT-Leaders

Location: Poland

Category: computer-and-mathematical

Our client is a fast-growing Series - -C data-first multi-cloud security company and a pioneer in Confidential Computing. Recognized by Gartner as a Cool Vendor, the company's technology is at the intersection of protecting data in the public cloud, on IoT services, and securing applications by encrypting data while it is in use. The company is multinational with locations in the USA, India, and the Netherlands. They are actively seeking a Senior Software Engineer to fortify the team. The driving force behind crafting, developing, and deploying the foundational observability platform services. In this pivotal role, you'll be instrumental in the pursuit, contributing significantly to the ecosystem's blueprint, crafting and implementing micro-services within a hybrid cloud framework. You bring forth a visionary perspective, capable of conceiving and constructing an exemplary system from its very inception. Requirements: At least 8+ years of professional experience as a Backend Senior Software Engineer. Hands-on experience in Rust, C++, or Golang. Hands-on experience working with NoSQL databases such as Cassandra, MongoDB, etc. Hands-on experience working in a Linux environment. Having Security (Crypto, Key Management) experience is a plus but not required. Familiarity with containers and orchestration (Kubernetes). Coursework and/or professional experience in computer architecture and operating systems. A bachelor's degree in Computer Science, Information Systems, or related field, or equivalent training or work experience. Personal characteristics: Exhibits uncompromising integrity Pays attention to detail Thinks critically about complex technical problems Can work independently, while also being an effective member of a team English level: Upper intermediate Responsibilities: Architecting micro-services to bolster the

infrastructure. Contributing to the technical roadmap to steer the strategic objectives. Spearheading the identification and design of novel observability platform requisites. Leveraging expertise in the Rust programming language. Collaborate closely with other internal teams to enhance the foundational pillars of SaaS and on-premise products. Your team plays a pivotal role, in ensuring contract-based assurances on platform services, features, and their interdependencies. It falls upon you to define these assurances and their parameters, setting the course for our platform's steadfast evolution. Bring the secure by design mindset by proactively incorporating robust security measures into the architecture, development, and maintenance of the observability platform, ensuring the confidentiality, integrity, and availability of sensitive data throughout its lifecycle. Important Hiring process includes 3 rounds of technical interviews (real time coding included) with the customer`s team
