Solution Architect (Defense Platform)

Apply Now

Company: Sigma Software

Location: Poland

Category: computer-and-mathematical

Overview

Required skills

Architecting large-scale software products / strong C++ / strong PythonJavaScriptGo / good English / strong

We are looking for a mature Solution Architect who strongly desires to contribute to the product development of an innovative Defense Platform that will disrupt the economics of cybercrime.

Sounds exciting?

We hope you can join us in that mission!

Customer

The company was founded in 2012 in Brooklyn. Our humble beginnings led to the creation of the Defense Platform, the backbone of all our products that safeguards enterprises from sophisticated bot attacks, fraud, and account abuse. Today, we verify the humanity of more than 20 trillion interactions per week for some of the largest companies and internet platforms.

Project

You'll join us at an exciting moment in our product story: we joined forces with two big companies in a market-changing merger. Together, we will disrupt the economics of cybercrime. We hope you can join us in that mission.

Requirements

Requirements

Hands-on expertise in architecting large-scale software products

At least 5 years of experience in C++ programming

Familiarity and proficiency in other programming languages such as Python, JavaScript, Go, or any other

Previous experience navigating the Cyber Security landscape, including accreditation of solutions in high-classified, secure environments

Excellent analytical and technical skills

Fluent English

Experience working with algorithms, databases, modern frameworks, etc.

Personal Profile

Outstanding communication skills, both written and spoken in English

Ability to foresee and manage technical risks effectively

Strong sense of responsibility, commitment, and proactiveness

Responsibilities

Responsibilities

Elevate existing solutions by working on legacy code, ensuring continuous improvement

Conduct a thorough analysis of the current system architecture and contribute innovative ideas for optimization

Address technical issues, conflicts, and challenges, ensuring smooth operation of the software ecosystem

Define architectural principles, design patterns, and coding standards to ensure IT solutions' consistency, maintainability, and reusability

Assess and evaluate various technologies, platforms, frameworks, and tools to determine their suitability for the organization's IT landscape

Consider factors such as performance, scalability, security, compatibility, and cost-

effectiveness. Make recommendations and guide the selection of appropriate technologies

Work closely and continuously with clients' stakeholders to meet business/client requirements and incorporate broader aspects

Ensure relevant technical strategies, policies, standards, and practices are applied correctly across technology programs/projects and products

Collaborate cross-functionally with R&D and Research teams to enhance product optimization
